Navigation panel (PRODUCTS, SOLUTIONS, etc.) is a static header at the top of the page that remains when scrolling.

Menus open when hovering indicated items in the navigation panel. Navigation items without menus are direct clickable links to another page.

5 This section of the navigation panel is displayed prominently with the existing icons because the majority of current traffic to the site uses these links. See the next page for a possible progression to a more modern design once the new site layout is established with visitors.
